Edithvale-Seaford Wetlands Ramsar Site Boundary Description

Technical report
Introduction

Ramsar wetlands are wetlands of international importance listed under the Convention on Wetlands (Ramsar, Iran 1971). Victoria has 11 wetlands listed under this convention including the Edithvale - Seaford Wetlands Ramsar Site.

It is a requirement of the Convention on Wetlands that a suitable map or maps are provided for each Ramsar wetland. The Department of Sustainability, Environment, Water, Population and Communities (SEWPAC), requires that both the written description and the spatial data of the Ramsar site boundaries are accurate. This information is used to gazette the boundary of the declared Ramsar wetland in accordance with Section 327 of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). Under the EPBC Act there are requirements for approval of activities which have, or are likely to have a significant impact on the ecological character of a declared Ramsar wetland. Precise identification of site boundaries helps to ensure that the exact boundaries of the Ramsar site can be easily identified, which can facilitate compliance with the EPBC Act as well as its effective enforcement.

The RAMSAR100 spatial dataset is a polygon layer that identifies each Victorian Ramsar area individually. The Department of Sustainability and Environment (DSE) is the custodian of RAMSAR100. Most of the line work in RAMSAR100 was initially derived from 1:100,000 reference data. Because of its broader scale, this data was not always consistent with the cadastre and other more accurate features that have now been used to better define the majority of the Barmah Ramsar Site.

The RAMSAR100 spatial dataset is a polygon layer that identifies each Victorian Ramsar area individually. The boundary of the Edithvale-Seaford Wetlands Ramsar Site was added to RAMSAR100 in 2001 when the site was formally listed as a Ramsar site based on the best cadastral data at that time. The Department of Environment and Primary Industries (DEPI) is the custodian of RAMSAR100. More accurate features have now been used to better define the Edithvale-Seaford Wetlands Ramsar Site. The updated spatial definition of Edithvale-Seaford Wetlands Ramsar Site is identified in a new RAMSAR25 spatial dataset.

This report details the written description of the Edithvale – Seaford Wetlands Ramsar Site to explicitly define the Ramsar boundaries, along with accompanying maps.
Methodology of RAMSAR 100 GIS layer boundary realignment

An expert panel was convened to provide advice on the original intent of the Ramsar site boundaries based on a description of the Edithvale-Seaford Wetlands Ramsar Site in the Ramsar Information Sheet for the site (compiled in 2001).

Certificates of Title were obtained as required from the Office of the Surveyor-General, Victoria, to further clarify the intent of the Ramsar boundary.

DEPI manages the RAMSAR 100 spatial dataset. The current RAMSAR100 boundary of the Ramsar area was used as a guide to select appropriate features from the following 1:25,000 datasets:

- Vicmap Transport Road (1 February 2011)
- Vicmap Property (26 October 2010)
- Vicmap Hydro (1 January 2011)
- Vicmap Shared (for the state boundary) (11 November 2010)
- Public Land Management (PLM25) (8 December 2010).

High quality digital aerial photography was used where it was necessary to further clarify the original intent of the Ramsar boundary.

The geographical coordinates (latitude, longitude) used in this report are based on Geographic Datum of Australia 1994 (GDA94) and the areas are calculated using Albers Equal Area projection. The hectares of the site presented in the body of the report have been calculated using Albers Equal Area projection and rounded to the nearest whole number (see Appendix 1 for the site’s area calculated to two decimal places).
