‘Aboriginal communities are at the heart of Water for Victoria and have the experience and knowledge to make key decisions about water holdings and the health of our waterways.’

Minister for Water Lisa Neville

Water for Victoria, launched by the Minister for Water in 2016, recognises the values that water has for Traditional Owners and Aboriginal Victorians and the importance of self-determination.

The Victorian Government is committed to enabling self-determination for Traditional Owners and Aboriginal Victorians. For the first time, Aboriginal values of water have been recognised in law and in water planning and management frameworks across Victoria.

Water for Victoria includes six key actions on recognising and managing for Aboriginal values and aspirations for water and progressing self-determination.

The Department of Environment, Land, Water and Planning (DELWP) Aboriginal Water Unit is responsible for delivering the Aboriginal Water Program (AWP) and meeting the commitments outlined in Water for Victoria:

- **Action 6.1** to recognise Aboriginal values and objectives of water
- **Action 6.2** to include Aboriginal values and traditional ecological knowledge in water planning
- **Action 6.3** to support Aboriginal access to water for economic development
- **Action 6.4** to build capacity to increase Aboriginal participation in water management
- **Action 10.8** to increase Aboriginal inclusion in the water sector
- **Action 10.9** to support economic development through Aboriginal participation

Acknowledgement

We acknowledge and respect Victorian Traditional Owners as the original custodians of Victoria’s land and waters, their unique ability to care for Country and deep spiritual connection to it. We honour Elders past and present whose knowledge and wisdom has ensured the continuation of cultural and traditional practices.

We are committed to genuinely partner, and meaningfully engage, with Victoria’s Traditional Owners and Aboriginal communities to support the broader protection of Country and its waterways in the 21st century and beyond.

NOTE: Aboriginal and Torres Strait Islander readers are warned that this document may contain quotes and images of Aboriginal people who have passed.
Progressing self-determination through Victoria’s Aboriginal Water Program

Traditional Owners have managed land and water sustainably over thousands of generations but Aboriginal approaches to water have not influenced Victorian water policy. We are changing this.

The Aboriginal Water Program is a partnership between the Department of Environment, Land, Water and Planning (DELWP) and Traditional Owners and Aboriginal Victorians to manage our waterways and catchments across the state. Importantly, it is reconnecting communities to water for cultural, economic, customary and spiritual purposes.

The Aboriginal Water Unit is responsible for implementing the Aboriginal Water Program and meeting the commitments outlined in Water for Victoria. We are delivering the program and co-designing initiatives in collaboration with Traditional Owners and Aboriginal Victorians.

Together, we are working to secure a future where Traditional Owners’ water aspirations are embedded in water planning and management to deliver cultural, spiritual, social, environmental and economic benefits.

‘It is our human right – the rights of the Indigenous people of Australia. To be involved in water, have the right of access to water, and be participating players in the decisions made regarding water.’

July 2017
The water market trading workshop opened my eyes to many opportunities that I had no idea were available or even possible for the communities I work with.

Nick Stewart, Wamba Wamba Traditional Owner, Aboriginal Water Officer, North Central CMA and Co-Chair Aboriginal Water Officer Network

Aboriginal Water Officers are integrating cultural values in water planning and management

One of our first priorities was to fund Traditional Owners to take an active role in the management of the state’s water resources.

Aboriginal Water Officers (AWOs) play a significant role in promoting informed discussion to support Aboriginal values and uses through Victoria’s existing water resource planning and management processes.

AWOs have delivered Aboriginal Water Program projects in partnership with Traditional Owner corporations, Aboriginal communities, catchment management authorities (CMAs) and water agencies.

Since the Aboriginal Water Program began in 2016, the Victorian Government has funded 23 full-time Aboriginal Water Officer positions to actively support Aboriginal communities to increase their participation in water planning and management.

The AWO positions provide a dedicated water expert on Country to support Traditional Owners to self-determine how they wish to partner with the water sector.

AWOs work on local projects and programs to contribute to environmental outcomes and economic benefits for local Aboriginal communities. Their projects and research support the Victorian Government to better understand and incorporate traditional ecological knowledge into water resource planning and management for the health of our shared waterways.

The Aboriginal Water Unit, in partnership with the AWOs, established the Aboriginal Water Officer Network as a forum to share knowledge and practices. It is administered by the AWOs to provide support for each other and strengthen capability to participate in the water industry.

AWOs work to build strong and collaborative relationships to contribute to environmental outcomes and economic benefits for local communities. They are a vital way we are working with Traditional Owners and Aboriginal Victorians to incorporate Traditional Owner knowledge of Country into water policy.

I’ve had great support along the way from my Wimmera CMA colleagues and I’m excited about the next steps in my career. It’s great to see Aboriginal Water Officer roles like mine across the state now!

Ben Muir, Wotjobaluk and Jardwadjali Traditional Owner, Aboriginal Water Officer, Wimmera CMA and Co-Chair Aboriginal Water Officer Network
Our work to recognise Aboriginal water values and uses

We have invested in research on-Country and partnered with Traditional Owners and Aboriginal Victorians on local projects to progress Aboriginal water values, uses and cultural heritage.

Over the past four years we have invested in projects led by Traditional Owners to better define and document Aboriginal values, uses, and aspirations of Victoria’s waterways and catchments. These projects explore cultural mapping, seasonal watering plans, water management plans, and research of cultural and environmental flows.

To achieve their aims, several projects undertook Aboriginal Waterways Assessments (AWAs), an effective and culturally safe tool for Traditional Owners to document water-related values on Country, and influence waterway management. The AWA findings, together with other outcomes of the values and uses projects, have identified improvements that could be made to waterways in Victoria.

The eight values and uses projects have been led by Traditional Owners in partnership with CMAs and DELWP.

Our work to support Aboriginal access to water for economic development

In partnership with Traditional Owners we are working to explore and develop opportunities for Aboriginal enterprises through access to water.

The Aboriginal access to water for economic development program has been co-designed between Traditional Owners, the Federation of Victorian Traditional Owner Corporations, MLDRIN, and the Aboriginal Water Unit and has been delivered in three stages.

Stage One
The first stage was the Accessing Water project led by the Murray Lower Darling Rivers Indigenous Nations (MLDRIN). A series of workshops assisted Traditional Owners to explore questions around water rights, the water market and trading. The outcomes of these workshops will contribute to innovative policy to recognise Aboriginal water rights. Traditional Owners and representatives from CMAs, Victorian water corporations and DELWP staff attended these workshops across the state.

Stage Two
The second stage funded 11 pilot projects to explore opportunities for Traditional Owners to access water for economic development and to inform planning for future investment. The pilot projects have been co-designed between Traditional Owners, the Federation of Victorian Traditional Owner Corporations, MLDRIN, and the Aboriginal Water Unit.

These projects tested the feasibility of aquaculture, bush foods, native plants, water-based education and cultural tourism across Victoria.

Stage Three
The third stage of the Aboriginal Water Program will be informed by the findings and results from the first two stages. The Aboriginal Access to Water Roadmap will be co-designed with Traditional Owners to identify access to water for economic development and water for social, cultural and spiritual outcomes.

Pilot projects
- Aboriginal Farming
  Barengi Gadjijn Land Council Aboriginal Corporation
- Bunurong Aquaponics
  Bunurong Land Council Aboriginal Corporation
- Healing Water Aquaculture
  Dja Dja Wurrung Clans Aboriginal Corporation
- Eelimg and Bushfoods
  Eastern Maar Aboriginal Corporation
- Native Fish Aquaculture
  First Peoples of the Milieuwa-Mallee Aboriginal Corporation
- Water-based Cultural Tourism
  Gunaikurnai Land and Waters Aboriginal Corporation
- Killara Kooyang Water
  Gunditj Mirring Traditional Owners Aboriginal Corporation
- Water for Bushfoods Horticulture
  Taungurung Clans Aboriginal Corporation
- Water and Culture Education
  Wadawurrung Traditional Owners Aboriginal Corporation
- Water for Economic Development
  Barapa Barapa and Wemba Wemba nations
- Cultural Flows on the Murray
  Tati Tati and Wadi Wadi nations

Taungurung have access to water via a water use licence and are one of the first Traditional Owner corporations to have a water right of this kind. The project investigated the socio-economic benefits of Traditional Owners owning and making decisions around water – a first for Victoria. This project provides an opportunity to explore the best use of the licence in establishing a bushfoods horticulture business and plant nursery on the King River.

This eel (kooyang) aquaculture project will inform the long-term and sustainable water needs for this business at the Lake Condah Mission site. The project will harvest eels for the local community.

The Gunaikurnai Land and Waters Aboriginal Corporation investigated the feasibility of a water-based cultural tourism enterprise to operate across the rivers and lakes of their Country.

The project investigated options for developing and teaching water-based cultural activities to bring community members back on Country.

Aboriginal Water Program
Our work to increase Aboriginal participation in water management

We are continuing to support Aboriginal Victorians to take an active role in the management of the state’s water resources.

There has been positive progress to increase Aboriginal participation in the water sector across Victoria.

The Water and Catchment Legislation Amendment Act 2019 embeds Aboriginal cultural values into the planning and operations of Victoria’s water resource managers.

For the first time, Traditional Owners voices on sharing and managing water in Victoria’s Murray Darling Basin have been heard and documented through the Northern Victoria Water Resource Plan and the Wimmera-Mallee Water Resource Plan.

We saw a significant increase in the number of Aboriginal Victorians appointed to water authority boards and committees, with more than double the number of applications from identified Aboriginal people for the board recruitment process in 2019 (24 in total compared to nine in 2017).

- Five Aboriginal directors on four Victorian water corporation boards.
- Seven Aboriginal CMA directors.
- One Aboriginal member on the Victorian Catchment Management Council.
- The first-ever Aboriginal person appointed as Commissioner to the Victorian Environmental Water Holder (VEWH) in 2017.

- Membership on three Ministerial Advisory Committees.
  - Initial steps have been taken to recognise Aboriginal values and ecological knowledge in waterway management strategies, sustainable water strategies and state environmental protection policies.
- Our Catchments, Our Communities Integrated Catchment Management Strategy.
- Victorian Waterway Management Strategy (VEWH).
- Seasonal Water Plan (VEWH) and Seasonal Watering Proposals (CMAs).
- Review of the regional sustainable water strategies for the Central and Gippsland Region, Western Region and Northern Region.
- Reconciliation action plans for each water corporation are in development.
- A regional waterway strategy is being developed by each CMA.

The Yarra River Protection (Wilip-gin Birrarung murren) Act 2019 is the first legislation in Australia to be co-titled in a Traditional Owner language.

Additionally, significant shared benefits can be achieved for Traditional Owners and Aboriginal Victorians through partnerships with CMAs and the VEWH to release water for the environment. Shared benefits are the many cultural, economic, recreational, social and environmental benefits of water for the environment releases.

In May 2019, 500ML of water for the environment was released into the Moorabool River. A special event by Wadawurrung to mark the release also celebrated water and culture.

This moving celebration was the culmination of an 18-month partnership between the Wadawurrung, Corangamite CMA and DELWP to ensure Traditional Owners have a central voice in the management of waterways on their Country.

“Wadawurrung inclusion on the technical panel of the latest FLOWS study for the Barwon system identified the importance of protecting culturally significant species like the eel, maintaining deep pools and the recognition of confluences as culturally important places.”

“This important work informed the Wadawurrung’s decision to create a Buniya Binak with the women of their community. It was an honour to share the launch of the eel trap and the celebration of water on Wadawurrung Country.”

What’s next?

Together we have made significant steps forward, but we know we still have much more to do in the water sector to enable self-determination for Traditional Owners and Aboriginal Victorians.

The Victorian Government and Aboriginal Victorians are working to advance Treaty or Treaties following the passing of the Advancing the Treaty Process with Aboriginal Act 2018. This is an opportunity to formally recognise and celebrate the unique status, rights, cultures and histories of Aboriginal Victorians. It will benefit all Victorians by promoting reconciliation, fostering shared pride in Aboriginal cultures and helping to heal the wounds of the past.

DELWP’s Aboriginal Water Program is supporting to inform water management policy and decision making.

Together we are supporting Aboriginal access to water for economic development.

We have increased Aboriginal inclusion and participation in Victoria’s water sector.

The challenge we face is not easy, but it can and must be done. Future planning for the Aboriginal Water Program will be driven by working together to enable true self-determination for Aboriginal people, thereby creating a better future for all Victorians.

We are already planning to move into the next stage of the Aboriginal Water Program so that we can:

- implement an economic development roadmap to deliver water for Aboriginal values;
- address access to water for Traditional Owners for economic development and other self-determined uses;
- strengthen the capacity and skills of Traditional Owners and Aboriginal Victorians to promote and share Aboriginal values and knowledge with the water sector and further integrate this knowledge into water management processes;
- expand opportunities for representation of Traditional Owners and Aboriginal Victorians in water agency planning and decision-making;
- increase Aboriginal employment and procurement in the water sector;
- invest in environmental restoration to address and enhance Aboriginal cultural values and complement water ownership outcomes.

We are looking forward to the challenge.

What’s next?

Aboriginal Access to Water Roadmap

Our next step is to work with Traditional Owner corporations and Aboriginal Victorians to further develop the Aboriginal Access to Water Roadmap (the Roadmap). The Roadmap will be developed through a co-designed process with Traditional Owners and will be based on the outcomes of various pilot projects occurring around the state.

It will guide our next steps for investment and policy reform. The Roadmap intends to contribute to self-determination by identifying opportunities for Traditional Owners and Aboriginal Victorians to access water.

Throughout the process of shaping the Roadmap through three years of program delivery, Traditional Owners have advocated for a holistic approach for access to water, not only for economic development but also for cultural, spiritual and social purposes. To support this, we have expanded the scope of the Roadmap.

The Roadmap will provide equitable and sustainable outcomes for Aboriginal Victorians through their engagement in water management, and readiness for Victoria’s nation-leading treaty process. This process will address the exclusion of Traditional Owners and Aboriginal Victorians from water policy, design and management, and enable self-determination.

Cultural flows are a way of translating Indigenous people’s water rights, needs and aspirations into the language of modern water management. First Nations have the right to own and manage water on our Country to support self-determination.

MLDRIN Echuca Declaration, 2007

‘Our connection to the river is not only through the past, it’s about desire for a great future for our community.’

Wergaia Elder Ron Marks, Barengi Gadjin Land Council Aboriginal Corporation
‘Respect for the role of water in Aboriginal cultural heritage is a great example of Water for Victoria and our self-determination agenda in action.’

Minister for Water, the Hon. Lisa Neville

‘One waterway might cut across multiple traditional owner groups, or it might cut across multiple catchment management authorities. So it’s not just thinking about your little patch – it’s about working with organisations to think about the broader landscape.’

Rueben Berg, Gunditjmara man and first Aboriginal Victorian Water Commissioner
