

# 2018 WATER FOR THE ENVIRONMENT

## SHARE, CONNECT & IMPROVE (SCI)

**FEBRUARY 13 AND 14, 2018**

### Expressions of interest – symposium case studies

The **Applied Aquatic Ecology Hub** is hosting a two-day Water for the Environment symposium. The event aims to improve the understanding effectiveness, efficiency and impact of the interface between research, management and policy.

We are seeking expressions of interest for Water for the Environment case studies to be presented and potentially used for group work during the symposium. In considering the suitability of case studies the Organising Committee is looking for those that include:

- The policy or program context – what were the drivers?
- The scientific process that informed the case (e.g. FLOWS study, research, previous monitoring and evaluation).
- The knowledge transfer pathways (e.g. who generated, interpreted and communicated the knowledge between researchers, managers, policy makers and the community/Traditional Owners).
- How the science has been used in the mix of other information in water planning and adaptive management.
- The outcomes of applying the science. What happened vs the hypothesis? What contextual factors influenced the outcome?
- What has changed as a result of applying the research? (e.g. changes to policy, knowledge, work practices, behaviors, allocation of resources.)

Please send your suggestions to [robert.richards@delwp.vic.gov.au](mailto:robert.richards@delwp.vic.gov.au) by **November 17**.

**Be involved in  
improving the  
research –  
management –  
policy interface**

**Hear the latest  
science**

**Share knowledge  
and gain new  
insights**

**Work on real case  
studies**

**Connect with  
colleagues**
